

# TEACHING TOLERANCE

A PROJECT OF THE SOUTHERN POVERTY LAW CENTER  
tolerance.org

## Put a Little STEM in Your Life

*Place checkmarks next to the activities that interest you.*

### 1. Connect with scientists of the past.

- Grab a book about a scientist and read it to a younger student.
- Write and illustrate a bio about a female scientist or scientist of color and share this bio with someone else.
- Brainstorm your own idea and write it below.

---

---

---

---

### 2. Connect with scientists of the present.

- Follow the story of dirty drinking water in Flint, Michigan.
- Watch scientists at work on the website Ology: [www.amnh.org/explore/ology](http://www.amnh.org/explore/ology).
- Pose your science question to an expert online at Ask Dr. Universe: [www.askdruniverse.wsu.edu/meet-dr-u](http://www.askdruniverse.wsu.edu/meet-dr-u).
- Brainstorm your own idea and write it below.

---

---

---

---

### 3. Become scientists of the future.

- Get *really* good at math. Pick a math skill you want to improve and work with your teacher to chart your progress.
- Enjoy a science moment. For example, discover something new every day at [www.wonderopolis.org](http://www.wonderopolis.org).
- (*Fifth-graders only*) Keep your eyes on the prize. If you're about to head to middle school, you'll have choices to make: choices about classes you want to take and maybe even what school you want to go to. Make sure what you choose now matches your goals for later.
- Brainstorm your own idea and write it below.
