

## Puzzle of Unemployment

Write down the average unemployment rate you calculated in the appropriate box and circle it. Locate pairs with a different box circled than yours. Share your information. Keep going until you've filled in all of the six numbered shaded boxes. Once you've filled in the six shaded boxes, partner with another pair of students. Working in this group of four, calculate the averages and differences in the remaining boxes. Next, look at all of the data and identify two facts or trends it reveals. Finally, discuss everyone's findings as a whole class, and then write a summary statement.

	2007	2009	Difference
<b>Latinos/Hispanics</b>	1.	2.	
<b>African Americans</b>	3.	4.	
<b>Whites, Non-Hispanic</b>	5.	6.	
<b>Averages</b>			

Facts or trends revealed:
